Following are tips to keep your computer clean.
- Never eat, drink or smoke around the computer.
- Turn off the computer or peripheral before cleaning.
- Do not get the inside of the computer damp.
- To clean the outside case, use warm water with a little liquid detergent rather than cleaning solvent.
- Do not spray any type of liquid onto any computer part, such as the monitor. Spray the liquid first onto a cloth.
- You can use a vacuum to remove dust from your keyboard or compressed air in a spray can that forces air into crevices to remove dust, hair, etc.
- You can use a cotton swab and rubbing alcohol or water for difficult to reach areas.
